My dearests..... for my 15th birthday!Free Cities: Skylines Free Cities: Skylines - Best Add-Ons. More to Add: City-Map,Q: Where does this recursive formula come from in the same-index-of-indices theorem? I am studying a draft of a paper (Carpenter et al. 2018) which makes frequent use of the same-index-of-indices (SI-of-I's) theorem to prove enumerative formulas. Specifically, as an example, the authors prove that
$$\sum_{i=0}^j \sum_{\substack{k \leq n \\ k \leq j-i}} \binom{k-i}{j-i} = \sum_{i=0}^j \binom{j-i}{i} \binom{n}{j-i}.$$
 The trick here is to introduce a recursive formula to pass from the left-hand side to the right-hand side of the equation. I am fine with all of the manipulations except the recursive formula itself. It reads as follows:
$$\frac{n!}{(n-j)!} = \binom{n-1}{j} + \sum_{i=0}^{n-j-1} \binom{n-1-i}{j} \frac{i!}{(i+j)!}.$$
 What I am not clear on is where this recursive formula comes from. Does anybody know where this formula comes from? If not, why should anybody be interested in this formula? Can anybody supply a reference where this theorem is proved? A: It's the multinomial expansion
$$(a+b+c)^n = a^n + b^n + c^n + \sum_{k=1}^n \binom{n}{k} a^{n-k} b^k c^k.$$
